PWS Addendum 1, Virtual Attorney Visitation

The VAV program utilizes common web conferencing and videoconferencing applications to enable legal representatives to meet with their clients or prospective clients virtually using video technology in private rooms or booths to ensure confidentiality of communications during remote legal visits. VAV is not a substitute for in-person meetings, but it does provide an alternative for legal service providers to communicate with clients in a timely and efficient manner.

- The same guidelines in applicable ICE detention standards for in-person attorney/client visits will apply to virtual attorney client meetings and legal calls. Only legal representatives, legal assistants, and interpreters will be allowed; no family or friends of the clients are permitted. The attorney and/or his/her agents may contact outside interpretation services during the call or session. To ensure confidentiality of communications between detained non-citizens and legal representatives, the existing visitation officer shall maintain safety and security for all detained non-citizens/residents utilizing VAV. The officer shall be stationed outside of the confidential room, standing out of earshot, but within view to assist with any issues that may arise.
- Service provider shall identify private rooms or booths in the facility for VAV to be available in accordance with each facility's legal visitation hours (but at least eight (8) hours per day on weekdays and 5 hours per day on weekends and holidays in accordance with ICE detention standards). Phone booths should be soundproofed to at least the 30-35 decibel (dB) level to keep VAV conversations private.
- VAV rooms or booths must have closeable doors and the Service Provider should ensure visibility of detainees through windowed doors or other alternatives to ensure safety, while still maintaining confidentiality of the attorney-client communication. The Duramate brand booths will be detention grade. Features of a detention grade secure video visitation booth (SVVB) include a bench, (optional) desk integration, hardware-agnostic video mount and chase, LED lighting, acoustic paneling, visibility windows, fire suppression and adequate ventilation.
- The Service Provider shall have at least two telephones and a network line per station, with one telephone jack, a FAX-compliant plain old telephone service (POTS) line, and a VTC line.
- When not being utilized for legal visitation, these booths may be used for asylum interviews, credible fear interviews, forensic competency evaluations, or immigration judge (IJ) review hearings. VAV deliverables will not be apply in these situations.

The VAV program shall be operational within **4 months of contract award/modification** to include purchase and installation of equipment, training of staff, implementation of VAV procedures, and policy updates. If you're unable to meet the identified timeline you must provide written notification regarding the issues precluding compliance with the guidance.

Deliverables:

All deliverables listed below shall be submitted to the Contracting Officer Representative (COR) within **3 months of contract award** for review and approval:

- The service provider shall create and implement procedures, in writing, through which legal representatives can utilize an online scheduling system to verify legal representatives and

schedule legal visits or confidential legal calls. The procedures shall be added to the posted Legal Visitation Rules for each facility and be made available to the COR for posting on the facility webpage on www.ICE.gov.

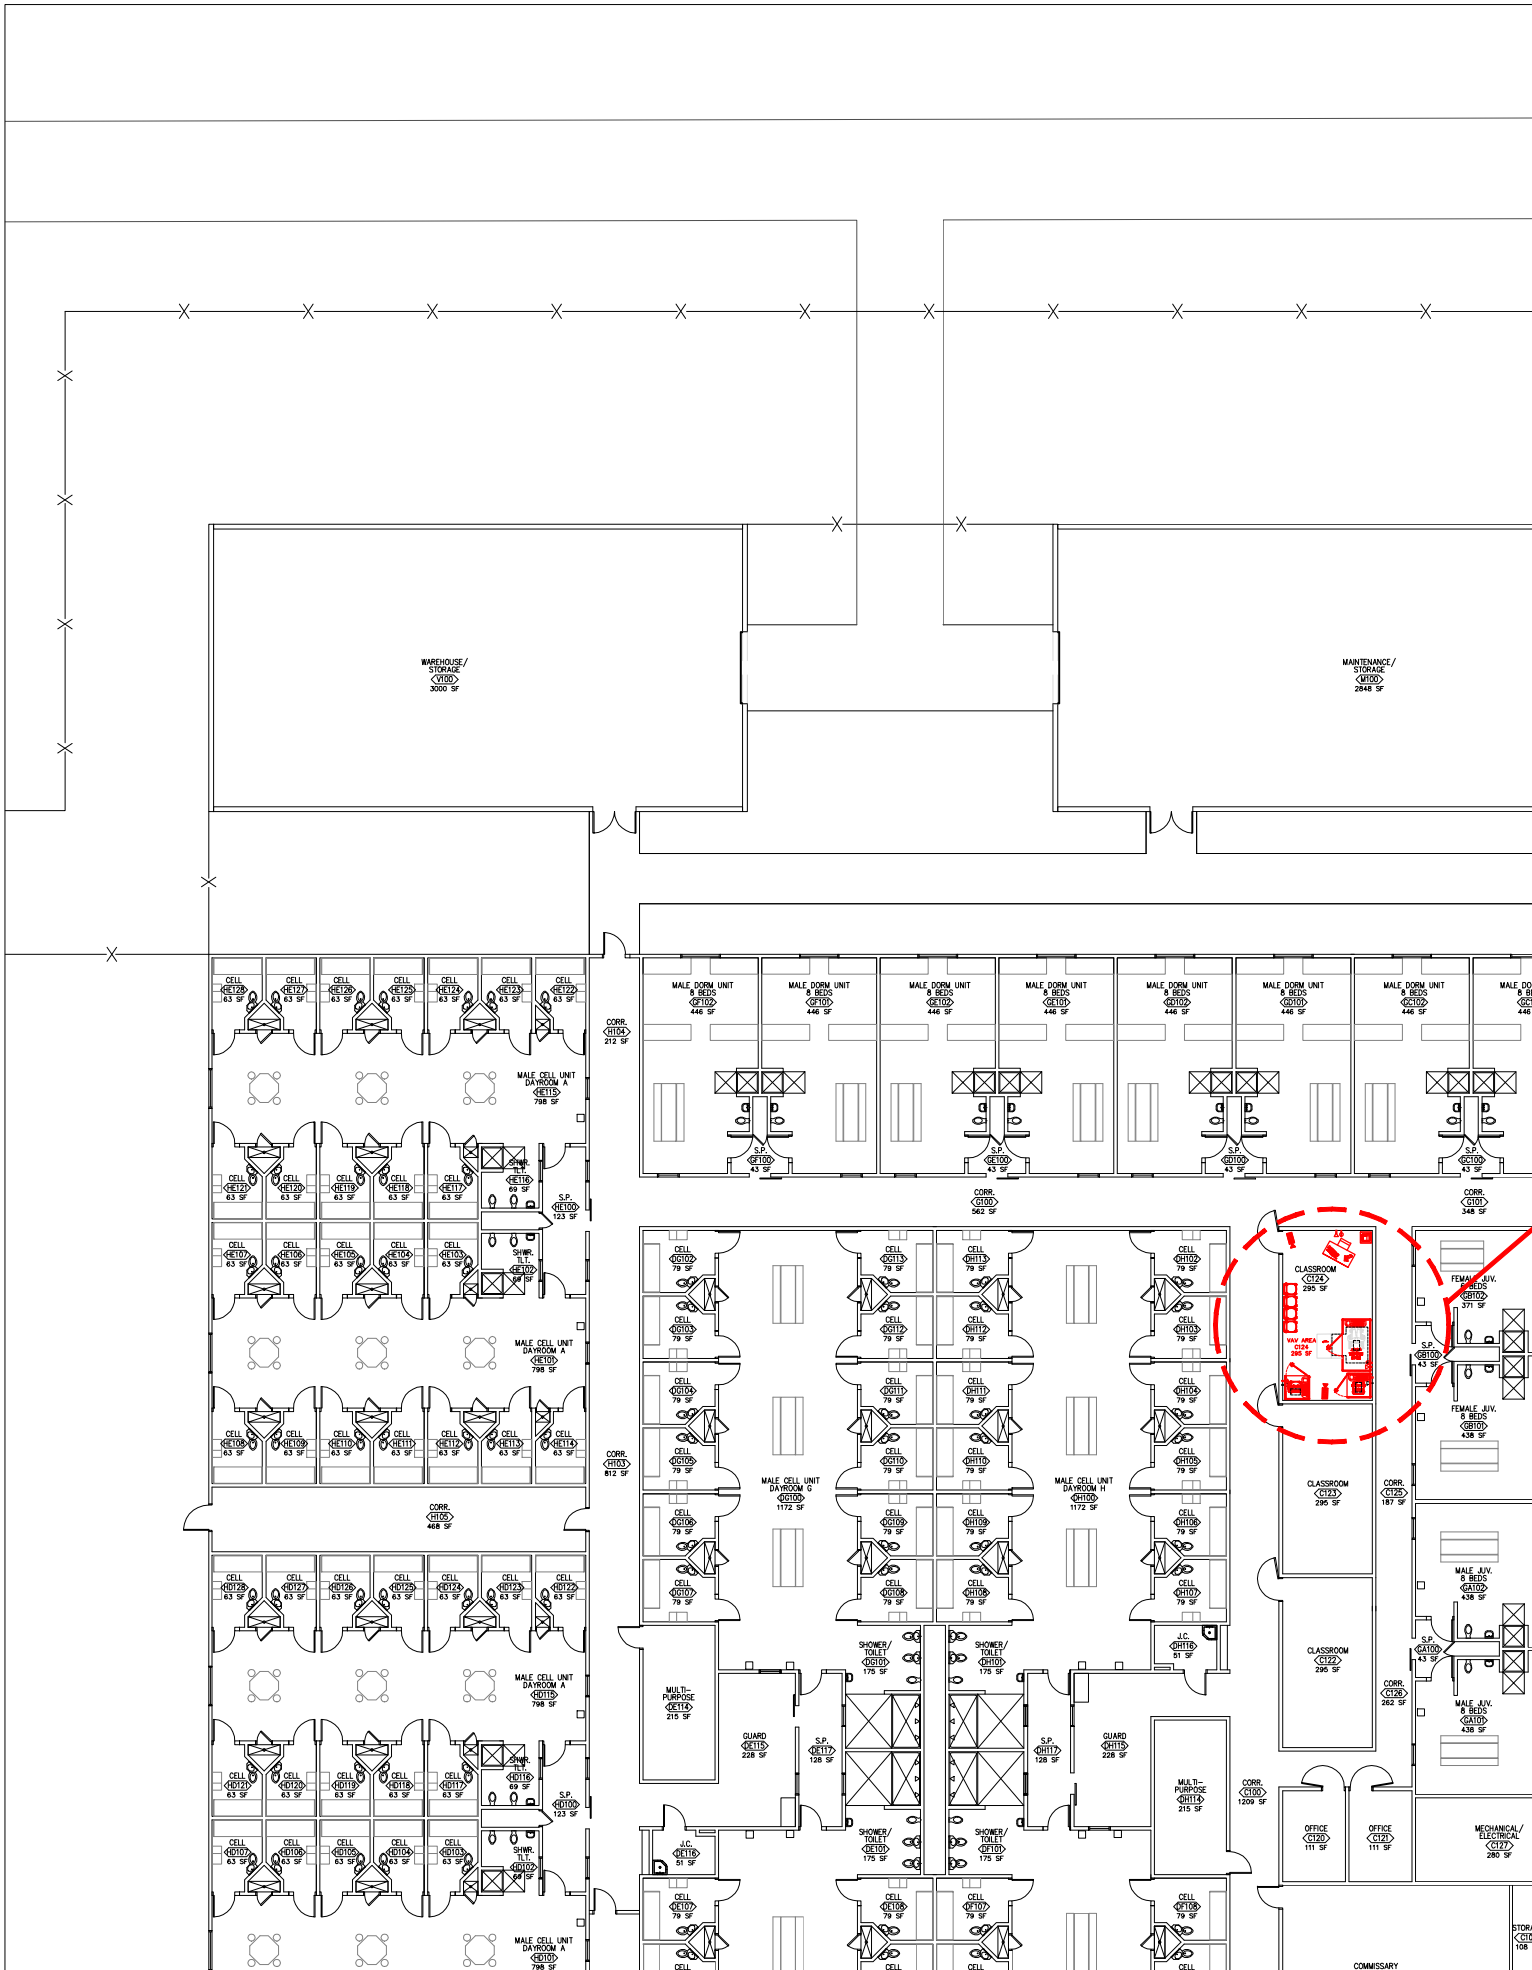

- The service provider shall appropriately staff the online scheduling system to ensure timely scheduling and response to requests.
- The service provider shall create and implement procedures, in writing, through which detained individuals and legal representatives may exchange confidential and non-confidential messages (such as the use of a dedicated email box or electronic messaging platforms). The service provider shall send written procedures to the ERO COR for posting on the facility webpage on www.ICE.gov.
- The service provider shall create and implement procedures, in writing, through which detained individuals and legal representatives may exchange confidential documents, via electronic means (e.g., facsimile or email), such as to obtain signatures. The service provider shall send written procedures to the ERO COR for posting on the facility webpage on www.ICE.gov.

The service provider shall maintain a usage log of the VAV and provide this to the ERO COR on a monthly basis. The usage log shall be provided using Microsoft Excel and include the following data elements:

- 1) Name of detainee and A#
- 2) Name of legal representative
- 3) Length of Call
- 4) Wait time (if applicable)
- 5) Interpreter Needed (if applicable)
- 6) Interpreter Language (if applicable)

All procedures and or manuals shall be provided to the COR for review annually.

The service provider shall notify ICE if the scheduling process changes, in advance of the changes taking effect.

Duramate™ Decibel Sound Testing & Reduction Results

Introduction:

The Spaceworx Duramate privacy booths are designed to offer privacy and sound absorption for private speech inside the booths. The aim of this report is to present the results of the testing conducted on the booth to evaluate its sound reduction capabilities.

The testing was done using a decibel meter to measure the ambient noise inside and outside the booth, as well as the decibels produced by a video being played inside the booth. The report also includes images of the decibel readings taken during the testing.

Methodology:

The testing was done in a quiet space producing an ambient noise of 28-30 decibels. The ventilation fans for the booth were not running during the testing. A professional sound decibel meter was used to measure the ambient noise level both inside and outside the booth. The booth was then tested by playing a video with sound peaks around 78 decibels inside the booth. The decibel meter was used to measure the sound level outside the booth with the door closed. The testing was conducted twice, once with a glass back wall and once with a felted back wall panel to compare the sound reduction capabilities of the two.

Results:

The ambient noise inside and outside the booth was measured to be around 28-30 decibels. For context, a quiet library is usually around 40 decibels of ambient noise. With the video playing inside the booth, the sound peaks were measured to be around 78 decibels. Two feet away outside the booth with the door closed, the sound level was measured to be around 33 decibels. This means that the sound being played inside the booth was inaudible outside the booth.

This result shows the booth is designed to absorb up to 45 decibels of sound reduction. However, according to the test results, the booth absorbs up to 40 decibels with a glass back wall and up to 45 decibels with the felted back wall panel. This indicates that the felted back wall panel is more effective at sound reduction than the glass back wall.

Images of Results:

The following images show the decibel readings taken during the testing:

1. Ambient noise outside the booth

2. Ambient noise inside the booth

3. Decibels produced inside the booth with video being played

4. Decibels produced outside the booth with video being played.

Conclusion:

The Spaceworx Duramate privacy booth is an effective solution for providing privacy for attorney-client meetings. The testing levels were done over and above the standard conversations levels of 60 db and the booth is able to absorb up to 45 decibels of sound reduction with the felted back wall panel.

Testing date: 04/7/2023

Disclaimer:

This report is only to provide context on how Spaceworx arrived at its advertised levels or sound reduction. It's important to note that test results can vary depending on the overall environment and method by which it is tested.

DURAMATE™

MODULAR COMMUNICATION BOOTHS

CONTACT PROPOSAL PREPARED FOR:

DURAMATE™ BRAND EXCLUSIVELY FEATURES A CORRECTIONAL - READY PACKAGE FOR YOUR FACILITY

A TuffShield™ Package Robust Correctional Package

A proprietary blend of durable materials featuring impact resistant, robust, heavy-duty hardware, and cleanable surfaces. Tamper resistant design and hardware

- Ultra-thick, robust cold rolled, precision machined steel main frame
- Industrial grade TGIC Polyester based Powder Coat finishes
- Anti-vibration, Noise cancellation, Fire retardent acoustics
- Premium Grade Stainless Steel Door Hardware

FireShield™ System

FireShield (Patent Pending) is a heat-activated fire suppression technology available in all our PODs, ensuring fire codes are met while maintaining modularity and flexibility to relocate units.

- Heat activated
- Modular alternative to hard piping sprinkler head
- NYC Fire Dept approval

QuietFlow™ Ventilation

Our proprietary efficiently designed air flow system provides sufficient and quiet circulation of fresh air intake, and equalizes exhaust for maximum comfort and acoustical balance.

- Rapid start, quick cool
- Low noise, maintaining acoustical properties
- Long life, energy efficient

PRODUCT SPECIFICATION

DURAMATE™ SINGLE

The Duramate Single™ POD is a perfect plug & play, inmate private video conferencing solution for virtual court hearings, visitations and telehealth.

SIZE: 41w x 41d x 85h

DURAMATE™ DOUBLE

The Duramate Double™ POD is a 2-4 person in-person or virtual meeting booth, designed to accommodate a variety of configurations of tables, lounges or stools.

SIZE: 87w x 48d x 85h

*Optional ADA ramp

DURAMATE™ ADA

The Duramate ADA Pod is a mid-size privacy booths offering ADA compliance by meeting the T shaped turning radius standards. The booth comes standard with a desk height countertop on one of the side walls.

SIZE: 63w x 46d x 85h
